

# Cooling System Service

## Entretien du système de refroidissement

### Can You See A Difference?

The benefits of a Wynn's® Cooling System Flush Service.

Dirty Radiator

Clean Radiator

### The Problem

- Coolant degrades over time.
- Rust and scale deposits can build up in the cooling system.
  - Can lead to poor coolant circulation, overheating and vehicle breakdown.
- Cooling system failures are the leading cause of mechanical breakdowns on the road.
- Conventional "drain and refill" services exchange less than 50% of the coolant.

Don't wait for your cooling system to let you down. Get a Wynn's® Cooling System Flush Service.

*Did you know that the Department of Transportation states that cooling system failures are the leading cause of mechanical breakdowns on the nation's highways? When cooling system failures do occur, they can result in very expensive repairs.*

*Your vehicle's coolant plays a vital role in the performance and longevity of your vehicle. It is the primary way in which your engine rids itself of potentially damaging heat, that when not properly removed can lead to diminished performance and eventually to mechanical breakdown. Overheating caused by a poorly performing cooling system can also lead to performance problems and even failures of the engine and transmission.*

*Unlike engine oil, most of the engine's coolant is not removed in a traditional drain-and-fill service. In fact, such traditional services replace only about 50% of the used coolant. The remainder is trapped inside the engine, the heater core and various lines and hoses. The addition of fresh coolant to this remaining used coolant can actually cause rust and scale deposits to loosen and clog coolant passages, leading to overheating.*

**Treat your vehicle's cooling system right with a Wynn's® Cooling System Flush Service.**

### The Solution

- Wynn's® Cooling System Flush Service removes up to 95% of the old coolant and contaminants.
- Prior to the coolant exchange, a chemical cleaner is added to existing coolant to safely remove rust, sludge and scale deposits.
- Following the coolant exchange, a proprietary product is added to the fresh coolant that will stop most radiator and heater core leaks, prevent foaming and lubricate the water pump.
- Wynn's state-of-the-art coolant exchange equipment is approved by multiple major vehicle manufacturers and insures a fast and complete cooling system flush service.
- Following the Wynn's Cooling System Flush Service, your vehicle's cooling system is again ready for the toils of the road.

*Wynn's Cooling System Flush Service utilizes specially designed equipment that connects to your vehicle's cooling system, and when combined with Wynn's proprietary cooling system chemicals, safely power flushes out the used coolant and contaminants. Fresh coolant is then pumped in along with proprietary conditioners that help maintain your cooling system and help it to perform as intended by the vehicle manufacturer.*
