

Fuel System Tune-up

Mise au point du système d'alimentation

Can You See A Difference?

Clogged Fuel Injector

Clean Fuel Injector

Dirty Intake Valve

Clean Intake Valve

Dirt, varnish build-up, corrosion and carbon deposits restrict the flow of air and fuel to your engine. This happens with all fuel-injected vehicles.

The Problem

Deposits in the fuel and air intake system that cause:

- Hard starting
- Stalling
- Rough idling
- Hesitation
- Knocking
- Loss of power
- Poor fuel economy
- Increased emissions
- A need for higher octane gas

If it has been a year or 24,000 km, your engine could have already built up deposits.

Keep your vehicle safe and reliable with a complete
Wynn's® Fuel System Tune-Up Service

The Solution

Completely clean the entire fuel system of deposits.

- Fuel lines
- Fuel injectors
- Intake valves
- Combustion chambers
- Throttle plate and throttle valve

Restore the fuel system to its original design for:

- Maximum performance
 - Easy starting
 - Smooth idling
 - Increased power
 - Eliminate knocking
- Maximum fuel economy
- Minimum emissions

Routine fuel system maintenance helps avoid expensive repairs.

For performance, safety and the life of your vehicle, make sure a Wynn's® Fuel System Tune-up is a part of your normal maintenance schedule. With Wynn's, you've got over 60 years of auto-care experience ready to help you avoid breakdowns and other expenses.

It's time for Wynn's!
